

# Euonymus atropurpurea Native

## Hamiltonianus Invasive

Relative of Euonymus atalus, winged burning bush. The invasive crowd out native herbs and shrubs. These have been sited south of Syracuse by IN-PAWS. Indiana Native Plant and Wildflower Society

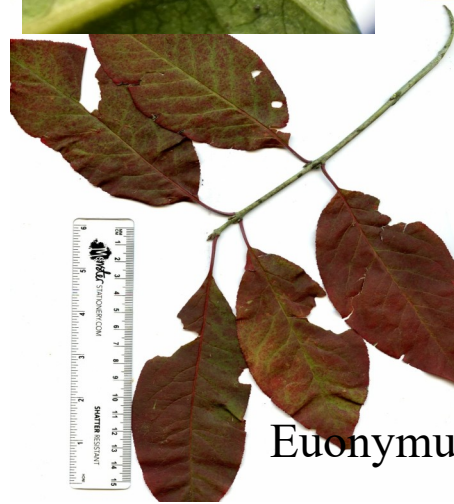

Euonymus atropurpureus fruit (right) E. hamilltonianus fruit (right)

Euonymus atropurpureus (Eastern wahoo) has a deeper purplish pink fruit than E hamiltonianus

Euonymus hamiltonianus (Hamilton's spindle tree) capsules are more pink

Euonymus atropurpurea

Euonymus hamiltonianus Hamilton's) spindletree has hairless (glabrous) underside of leaves unlike the native Euonymus atropurpurea (Eastern wahoo) with hairy underside of the leaves.

Euonymus atalus, winged burning bush.

Information from Na J Pillá

*Euonymus atropurpurea* (Eastern Wahoo) has hairs on the underside of the leaf unlike the invasive/non-native species which have hairless leaves.

**Alternate choices for red fall foliage in Northern Indiana from Arleen**

Native Staghorn sumac  
*Rhus glabra*

Native dogwood in fall is red. *Cornus florida*

Sericea Red Twig Dogwood

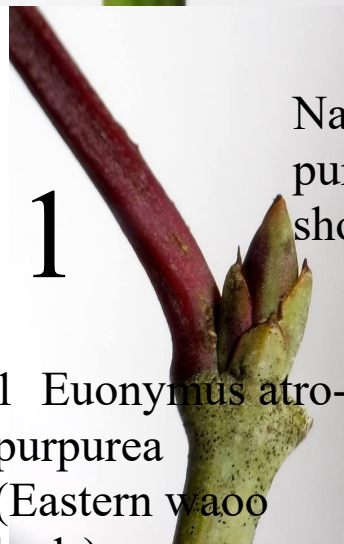

Hoping to give native Dogwood from collapse, Scarlet Fire from Arbor Days, may offer hope. *Cornus kousa* hybrid

1 *Euonymus hamiltonianus* (Hamilton's spindle Tree)

2 *Euonymus hamiltonianus* (Hamilton's spindle Tree) lateral buds

1 *Euonymus atropurpurea* (Eastern wahoo buds)

Native, purple shoots.

2 *Euonymus atropurpurea* Eastern Wahoo lateral buds

Native Red Sugar Maple  
*Acer saccharum*
